frames...*

INNOVATIVE | AFFORDABLE | ELEGANT | DURABLE

PRESENT THE
**THINKABLE
MASTERPIECES
IN MODERN
WINDOW FRAMES**

Windows reflect your style statement

A beautiful window is like a portrait that shows amazing patterns at different times of the day. You just wish you could sit on that windowsill to enjoy the rain beating on the glass panes and rejoice the glory of monsoon. The changing seasons working to bring about vividness in the images.

Other than providing a good view, the window also has to make way for the sunlight and the pleasant breeze to flow inside the rooms or homes. In all, windows are the very avenues for the propagation of light and the flow of fresh air into the room. The beauty and the security of the windows can never be enjoyed if the window frames are not the best. Therefore, it is necessary that the window frames are built using the best material. Strong window frames are one reason that keeps the robbers away from making an entry into the house.

It is therefore necessary to make use of a strong material for the windows and even the doors that have both the elegance and the sturdiness.

The uPVC frames designed by us can achieve this sturdiness. uPVC, an abbreviation for **Unplasticised Poly Vinyl Chloride** is also known as Rigid PVC, owing to the unique characteristics of the material. The advantages of making use of uPVC far exceed than those of wood or metal and are therefore the preferred choice among the leading builders across the Globe. There is rampant usage of uPVC window frames,

preferred choice among the
leading builders across the Globe...

doors and slider doors in the U.S. and the U.K. The greatest advantage of making use of uPVC materials is that it warrants the lowest possible maintenance and lasts longer.

A material that is as robust and available in any given shade that blends with the interiors as well as the exterior of the house is something that every homeowner carries his aspirations. The usage of uPVC over wood has its own advantages in that it saves the cost of painting the finished wooden frame. The strength of these materials can be gauged from the fact that they are being preferred to iron pipes for plumbing lines.

What are the advantages of uPVC window frames and doors?

uPVC is among the sturdiest material available and is therefore seen as the best possible alternative to the other materials such as wood or iron. The salient features of the material that make it the best are mentioned below-

Exclusive Range

Alubuild offers credible products that last longer

All weather window frames and doors:

The Alubuild uPVC window frames and doors have such composure that they can be used in any weather and under any circumstances. They can be used in buildings in the plains, atop the hills and even by the seashore. They have the capacity to withstand all the seasons and do not wither in icy, rainy or sultry conditions.

Endurance against wetness: It is hard to find a door material that is resistant to rain. The Alubuild uPVC doors are the most elegant looking rain resistant doors that you may find. They can withstand any amount of rainwater to which they are exposed.

Zero Maintenance: The Alubuild uPVC doors and window frames do not warrant any painting since the fabricated profiles come in several colored shades. These materials are designed to last a lifetime irrespective of the location in which they are used. The uPVC profiles also do not require a maintenance and therefore prove to be highly economical to the buyer.

Non-combustible: The Alubuild uPVC products are such that there is absolutely no possibility of them catching fire. In fact, these materials are resistant to fire. Therefore, these can be deemed as one among the safest materials used in the making of doors and windows.

Get irresistible and useful collection of uPVC window frames and doors

Long Lasting: The Alubuild uPVC materials have some of the best possible looks and are sturdy at the same time. The material quality is such that the products made by the uPVC profiles retain their brilliant looks even after several years of usage. Once these doors and windows are laid, they are there to stay for a minimum of three decades.

Consistent quality: With the Alubuild uPVC, you can be sure that they will remain consistent all through. These are fabricated that they are resistant even to the UV Rays and therefore remain resilient in all possible weather conditions.

Exclusive Range

Flexibility: The uPVC profiles brought forward by Alubuild are such that they can be shaped to any desired design. This makes them possible for them to blend with any possible design and therefore can suit the design parameters of any building layout.

Exclusive Shades

Adaptability: The Alubuid uPVC are made available in a wide range of colours and shades and therefore it is possible to choose these profiles to match the interiors of any room, house or building.

Eco Friendly: The uPVC profiles that are fabricated by Alubuild contain chemicals that are not harmful for the environment. It is therefore that their usage remains eco-friendly and is therefore very popular among the users.

Alubuild windows and doors: Advantages aplenty!

There a wide range of products that are developed using the Alubuild uPVC profiles as mentioned below-

Windows and Doors frames: The Alubuild uPVC profiles can be used for window and doorframes that can open either on the inside or on the outside. This gives the builder the required flexibility. The structural design of these materials is such that they render beauty to the surroundings in which they are located. These are frames are beautifully sloped and therefore cannot be impacted by any seepage whatsoever.

Sound Proof: In a welcome relief, the doors and windows made using the Alubuild uPVC profiles absorb the noise that emanates from the outside world. It is seen that they can attenuate up to 40 dB noise therefore making the environment inside the house calm and peaceful.

Heat Proof: The doors that are made using these uPVC materials are double coated and have sufficient locking options and therefore are able to lock the heat within the building. Therefore, these profiles must be used for the conservation of energy. It is seen that homes and offices built using the uPVC profiles can reduce energy consumption by thirty percent.

Strike Proof: The combination of materials used to fabricate these profiles ensures that they can provide protection against any possible physical impact. These profiles are as effective as metal doors against any impact.

Exclusive Range

Our products speak volumes about our quality

Sliding Doors: The uniqueness about the sliding doors made using these uPVC profiles is their unyielding strength in the frames. Strong corners along with superior and long lasting sliding tracks support the strong frames. These are designed so that they can be fitted with single or double glass sheets for insulation. There is also a separate passage so that the water that falls on them flows out quickly. This can be used to keep away mosquitoes, pests and flies.

Sliding Windows: The best possible advantage that the sliding windows provide is that they are highly resistant to wind. This is owing to the structural design of the material. They are available in single and double window depending upon the requirement. The gasket that is provided along with these sliding windows locks with a tight seal and therefore provides additional security. The grooves have been so fabricated that it is possible to lock them with a single lever.

Inward Opening Windows and Doors: It is possible to have doors that open from the inside with the Alubuild uPVC profiles. These are best used when it is required to ward off unwanted outside noise and to conserve energy. The inner portion of the door is inclined in such a manner that it flushes out all the water that falls on it. The locking system in these doors and windows ensure that they are completely theft proof. These have further been designed to ensure that

of water leaving the surface dry.

Sliding and Foldable Doors: These are innovative products built from the Alubuild uPVC profiles. These doors are seen to be highly efficient and effective. This provides the smaller houses and office spaces with that additional space that is so dearly required. These prove to be refreshing change in the open areas such as porticos, balconies or terraces. These are the new rage on the market and the Alubuild uPVC doors have been providing the right quality as and when required. These are very advantageous when the climate is clear and refreshing since

they reduce the transmission of heat to the bare minimum.

Lift and Slide Doors: In order to provide greater strength to the lift and slide doors, they have been provided with a support frame. These lift doors are designed in a manner that they are able to sustain great weights. They have been constructed in such a manner that they provide greater steadfastness to high-speed winds. These have been fitted with a separate drain outlet and have been provided with an incline structure that makes way for the smooth flow

Enjoy endless advantages of using affordable Alubuild windows and doors

people can enjoy the pleasant weather sitting in the comfort of their homes. It is also possible to have an unobstructed view of the park across or watch their terrace gardens watching their pet roses in full bloom.

Alubuild uPVC is known for the best quality of doors and windows that are in great demand. They are fast replacing the

traditional wood and metal doors owing to their superiority and added strength. Alubuild is a name that has been synonymous with excellence in quality and durability.
